SONIC magazine

Overview

Sonic is magazine designed to explore music genres, their subgenres, influential artists, and iconic instruments. Each spread visually reflects the energy of its genre through typography, scale shifts, alignment play, and structured negative space. The design process involved establishing a strong grid system, experimenting with typographic hierarchy, and balancing expressive layouts with editorial clarity. Through careful type pairing, spacing control, and image placement, the magazine translates musical rhythm into a structured yet visually engaging print experience.

Concept

Sonic translates musical rhythm and genre identity into a strong visual language through typography and structured layouts. As an exclusive editorial space, it brings together a community of music enthusiasts connected through shared culture and creative expression.

Problem Statement

How might we design a music magazine that effectively represents multiple genres while maintaining a clear, engaging, and navigable visual system?
